GI-SERIES GLUTARALDEHYDE

(DUCTLESS WORK STATIONS)

The highly efficient GI-Series Work Station operates as a "recirculatory system" controlling vapors of Glutaraldehyde, Formaldehyde, and General Organic Solvents without the expense of venting, ducting or special installation.

The compact design is for use on counter tops or if mobility is required it easily mounts to its own mobile cart.

To maintain a safe air velocity, these have automatic two-speed blower controls that sense the need for increased air flow when the clear safety shield is raised or lowered.

Also the unique design includes a quiet horizontal air flow pattern that exhausts clean air and includes a Low Air Flow alarm system. Its "NO TOOLS NEEDED" filter replacement feature compliments its overall low maintenance design.
